User registration,Login,Search product,Sort product,Fetch details, Wishlist, Add to cart, Profile update

---

## PROJECTS

JobHunt |React.js, Bootstrap5 , Node.js, Express.js and MongoDB

- The JobHunt website will allow users to search for and apply to job listings, as well as for companies to post job openings.
- The website will offer features such as user authentication, job search filters (by location, experience, salary, etc.), and user profiles for both job seekers and employers.
- The platform will use the MERN stack for efficient, real-time interaction between the frontend and backend, ensuring a seamless user experience.
- MongoDB will serve as the database to store users profiles, job listings, and applications, while Express and Node.js will handle the server-side functionality.
- React will be used to create a dynamic, responsive, and interactive user interface.

Aesthetic bliss (ecommerce) | HTML, CSS, JavaScript, PHP, MySQL and XAMPP

- In this project the owner can sell their products through online and the buyer can purchase through online.
  - The customers are the buyers and they can buy the products and do online payment if necessary.
  - Buyer has to register before and add the product to the cart.
- He can then view the orders or history Administrator can view and print all kinds reports. He has option to view the orders from buyer.
-
